Resume

ABSTRACT

The Furniture Shop Management System is a web-based application created based on a furniture shop that offers high quality furniture that goes from simple and classic to one very luxurious design. The shop offers furniture generously made of narra and of high quality fabrics imported from other countries. The shop creates furniture for display and for walk-in customers to see and purchase. They accept orders with designs picked from their brochures or customized designs specified or brought by the customer.

The Furniture Shop Management System helps the admin manage orders, monitor materials inventory and track furniture production. At the same time it will help them promote their products and reach customers on a farther vicinity. In this light, the furniture shop's customers can create an account for website access so they can easily order furniture, track the production progress of their order as well as the delivery. The project has three (3) subsystems namely; Order Management, Billing and Collections and Production Tracking System.

CHAPTER 1

PROJECT DEFINITION

1.1 INTRODUCTION

A Furniture Shop now stands on its 36th year with two stores found in Bacoar and Silang, Cavite. The shop offers high quality furniture that goes from simple and classic to one very luxurious design.

The business is owned and managed by a family, but mostly by the parents who still list and writes the orders made per day and the receipts and bill per transaction. It's difficult processing the transaction due to unorganized stack of charts and voluminous brochures. The shop also uses the forms improperly which leads to difficult retrieval of order records.

The proponents aim to provide a Web-Based Management system entitled, Furniture Shop Management System. This system will help the family in making faster transactions.

It will help them in storing and retrieving information, enhancing the security of their records. The customers will also find it more convenient to choose a furniture by sending their desired design with the customization feature. With this system, the furniture shop that is running for 36 years now, will keep up with the rapidly changing society and developing technology.

1.2 BUSINESS CASE

1.2.1 BACKGROUND OF THE ORGANIZATION

The Furniture Shop makes high quality furniture made of narra wood with designs that goes from simple and classic to a very luxurious one. They offer furniture generously made of narra and of high quality fabrics imported from other countries. The shop creates furniture for display and for walk-in customers to see and purchase. They accept orders with designs picked from their brochures or customized designs specified or brought by the customer.

The 36 year old running business now has two stores; both stores are managed by the family members themselves. One of the owners, proposed the idea of making furniture shop to her husband because she herself is a daughter of a furniture maker. She used to help her parents way back when she was in their care, her parents influenced her in every way and together with her husband they build the Furniture shop together.

This business is the reason they got to where they are now, from a small shop at vicinity in Albay, Bicol to owning two stores located nearby the capital city of the country. The Furniture Shop is also the reason how they manage to send their six children to decent universities and now their children are working at great companies and is helping them from time to time.

The Furniture shop's number one priority in furniture making is ensuring that the furniture they make is of high quality and can be considered world class. They also wanted to join the bandwagon of online shops in the country to be part of this rapidly changing society.

1.2.2 PROJECT OVERVIEW

The project aims to help the said Furniture Shop in making their transactions faster, easier and help them keep pace with the rapidly changing society by providing them a web-based system. This web-based system will have a website and an admin interface. The admin interface is where the manager can update their featured furniture, add and remove furniture and manage orders made personally or through the website. The website will display all furniture the shop can offer. The customer can easily order furniture just by browsing through the website and the manager will find it easy to manage orders and produce the customers' bills and receipts.

It will also help the customers choose design on their perspective by sending their own design in our customization feature. With the system the manager can easily store and retrieve information, thus minimizing the time for looking upon the client's record every time they deliver.

1.2.3 PROJECT CONSTRAINTS

The constraints considered by the proponents are the following:

- Time frame given for the project is 10 months, limited amount of time to build the system.
- The scope of the project covers maintainance and transaction processes of the business.
- The proponents are currently students with limited source of income. It is certain that they cannot invest financially.

1.2.4 PROJECT ASSUMPTIONS

- **The Project will be finished on time.**

The fully-functional system project will be finished on time with no errors and bugs.

- **The project team will be able to acquire all the information and documents needed.**

The client will be able to provide all necessary documents and information for the Project Team to comply with the requirements of the project and be able to provide them a running system that functions accurately.

- **User Acceptance**

The client will be satisfied with the final outcome of the project. The project will lighten the works of the users, their transaction will be faster and provide a better service to their customers.

1.3. SCOPE AND LIMITATION

The business processes of the furniture shop that will be featured in the system includes managing of orders, creation of bills, issuance of receipts, collecting payment, tracking of production and monitoring materials.

The project also includes point of sales and delivery tracking. The system will have a customization feature which allows the customers to send their own design of the furniture. Maintenance of the fields needed for the transactions will be covered. The project also produces queries and reports.

The system will not cover the purchasing of materials in monitoring the inventory of raw materials.

1.4. METHODS USED IN THE STUDY

1.4.1 DATA GATHERING TECHNIQUES

- **Observation**

The proponents observed the business environment and how they do things thus making it easier for us to know their problems.

- **Personal Interview**

The proponents conducted an interview to gather data needed for this project. This serves as the way to obtain useful information to the people who know the business very well.

- **Document Analysis**

The forms we gathered will be analyzed to understand the business and know what data are needed for the transactions.

1.4.2 Software Process Model

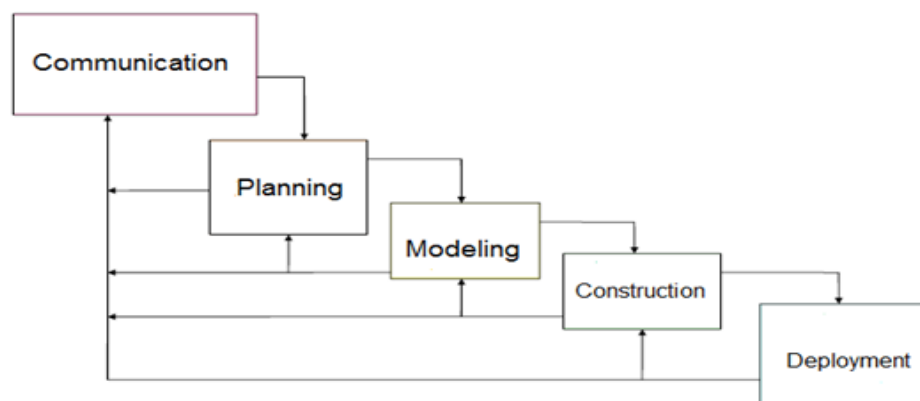

Figure 1. Waterfall Model with Feedback

The proponents used the Waterfall Model with Feedback as a model used in visualizing the step by step process the group is going to take to finish the project on the scheduled time. The Waterfall Model with Feedback is a simple and easy to use model because of its rigidity. Each phases has a specific deliverable and a review process therefore after making progress on the project we can go back to the client and ask if what we produce is accurate according to their business rules and processes.

2.2.2 POLICIES

BR NO.	BUSINESS REQUIREMENT
BR001	The production of furniture will begin once the customer paid a down payment of at least 50% of the total amount of the ordered furniture.
BR002	A minimum storage fee of PHP 500 pesos will be added to the total balance if furniture is not claimed or is fully paid on or before the day the contract will end.
BR003	A detailed description and specification is needed for customized furniture.
BR004	Damage on furniture caused by natural disaster and by improper use or maintenance is not covered on the warranty.
BR006	Official receipt must be presented to acquire warranty.
BR007	A minimum fee of PHP 500 is needed to cancel an order that is already undergoing production.

2.2.2.1 BUSINESS REQUIREMENTS***Table 3 Business Requirement***

BP NO.	BUSINESS POLICIES
BP01	The customer must pay at least 50% of the total price of the furniture ordered for the production of furniture to begin.
BP02	On-hand furniture must be fully paid upon acquisition.
BP03	Furniture must be claimed, paid or delivered on or before the end of the contract.
BP04	A customer must pay a cancellation fee if he/she cancels his order that is already undergoing production. Cancellation fee varies.
BP05	If ordered furniture is not claimed and fully paid within 1 month (30 days) and 1 week (7 days) after the contract's expiration the management has the right to resell the furniture.
BP06	The price of a customized furniture will be decided by the management
BP07	The furniture will be replaced or repaired if found broken upon delivery.
BP08	Six months warranty is given to all furniture.

2.3 PROBLEM ANALYSIS

2.3.1 FISHBONE

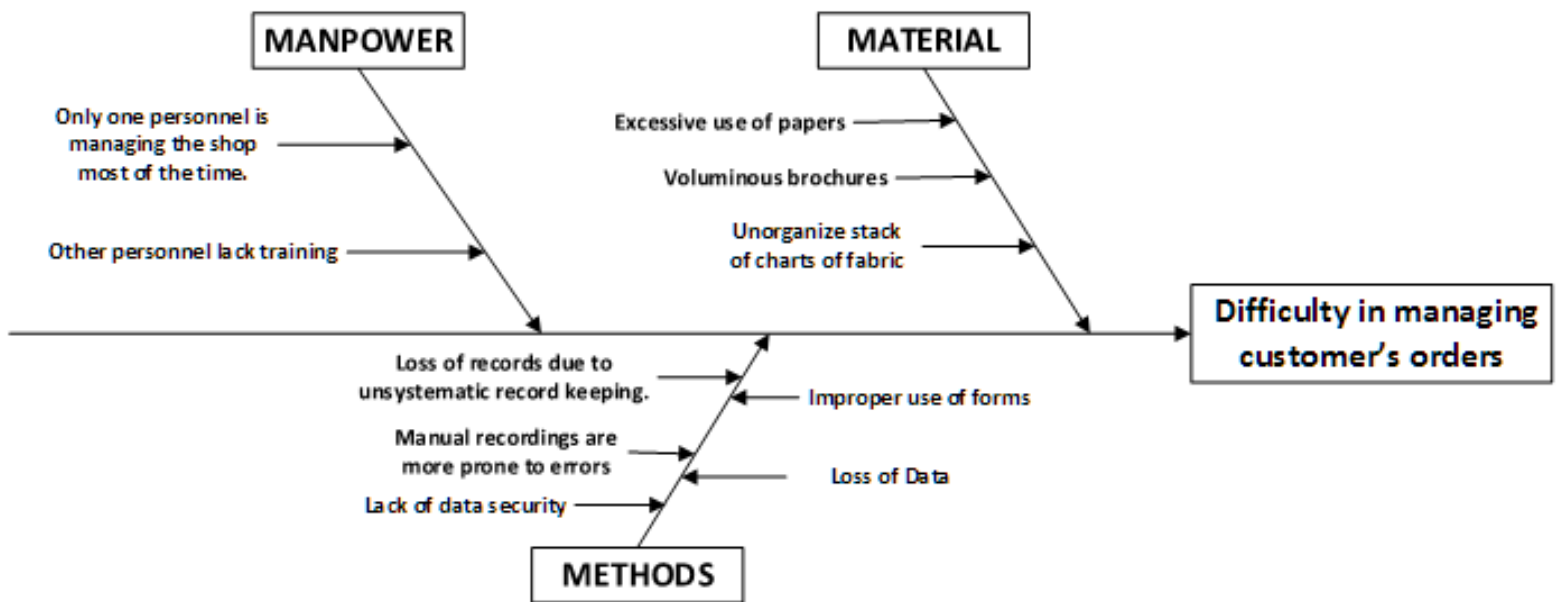

Figure 9. Fishbone Diagram of the Furniture Shop

2.3.2 PROBLEMS AND REQUIREMENTS

Ref. Page	No.	Problem	Requirements
16	1	Only one personnel is managing the shop most of the time.	Capability to efficiently manage orders with the resources available.
16	2	Loss of records due to unsystematic record keeping.	Secure records in a database to manage records systematically.
16	3	Lack of data security.	Ability to keep the gathered data secure and control the user access.
16	4	Excessive use of papers.	Capability to minimize,if not eliminate the use of paper.
16	5	Voluminous brochures.	Provides categorized products for display.
16	6	Improper use of forms.	Capability to identify the form/s to be used in the given transactions.
16	7	Loss of data.	Ability to keep data for every transactions made.

Table 5 Problems and Requirements

2.3.3 CONCLUSIONS

The Furniture Shop offers high quality furniture made of narra wood. They aim to provide high quality furniture that goes from simple and classic to one very luxurious design, not just to citizens of Cavite but as much as possible, to the whole country.

As of now, the said Furniture shop uses the manual process of recording data, the manager will write the customer information, order information, billing information, and they allow the client to customize their own designs of furniture. A lot of data is being stored so the shop uses excessive papers, papers that are being stored on the file cabinets around their small office. They also use their forms improperly providing confusing records that leads to difficulty in managing customer's orders.

2.3.3 RECOMMENDATIONS

In order to help the business resolve the problems stated above, the proponents recommend the Furniture Shop to have a Web-Based system that will help them manage order and the information that is going in and out of the shop, at the same time will help them promote their products and reach customers on a farther vicinity. The Furniture Shop Management System will have the following sub-systems:

The Furniture Ordering Management System, this sub-system will help the manager in managing the orders. The customer will be able to order furniture easily. Additionally, this sub-system also has a customization feature where the customer can customize furniture to their own liking. In this sub-system, all on-

hand furniture and furniture available for pre-order will be displayed per category for the customer to easily choose. Once, the customer is done ordering he can just check-out and proceed to billing. The customer information will be needed for verification.

The Billing and Collection System, this sub-system will compute the total amount of furniture in the customer's orders. After checking-out the customer will receive an email from the furniture shop containing his bill and where and how the customer can pay. If the ordered furniture is on-hand and the customer has paid for it the furniture will be delivered. If it's pre-order, the production of the ordered furniture will begin once the customer has paid 50% of the total amount. However, the order will be considered null and void if the customer fails to pay within seven days. This sub-system will help in producing receipt easily, lessening the time needed for writing.

The Production Tracking System, this sub-system will track the production of an order. After the transaction is settled, the manager will issue job order form for the manufacturers, this job order form contains the specifications and descriptions of the furniture to be made. This sub-system will enable the manager to view and update production progress information, which includes status of the production, the handler who will make the furniture, and the production progress percentage of the furniture.

1. Admin accesses Releasing of orders in transaction.	2. List of orders to be delivered must be displayed.
3. Click New button	4. Enables user to modify an order to be released.
5. Click Delivery Receipt	6. Must output a receipt to be printed.
Update Furniture Sales	
1. Admin accesses orders.	2. Displays all the furnitures for sale.
3. Click Update button.	4. Enables the admin to modify furniture information.
5. Click Save button	6. Saves the updated furniture information.
Issue Billing Receipt	
1. Admin access Orders	2. List of orders withing bills must be displayed.
3. Click Bill button	4. Billing receipt must be produced
Issue Official Receipt	
1. Admin access Ordering in transactions	2. Enables user to order from brochures displayed.
3. Click save button	4. Saves information to the database.
5. Click Print button	6. Official receipt must be produced.
Accept Order Requests	

1. Click Order Request from Orders	2. Displays list of order requests from the website.
3. Click Accept button	4. Accepts the order requests and transfer to Orders.
Send Customized Furniture Design	
1. Admin access Dashboard.	
2. Click Customization Request	3. List of customer request must be displayed.
4. Click Accept	5. Accepts the request made by the customer.
Maintain Customer Information	
1. Admin access Customer information tab.	6. Displays list of customers' information that can be modified.

Use case: Monitor Production

Actor/s: Manager/Customer

Purpose: Enables the management and the customer to track the production made per order.

Brief Description: Monitoring of the production per furniture ordered.

Pre-condition: Must be an authenticated user.

Post-condition: A production must be updated per phase finished.

BASIC FLOW	
ACTION EVENT	SYSTEM RESPONSE
Issue Job Order Form	

1. Click 'Update' on any production phase displayed.	2. Enables the user to update Production Information of furniture depending on what phase the production has gone to.
	3. Display's list of materials needed.
4. Click 'Print Job Order'	5. Job Order Form must be issued
Update Production Information	
1. Admin accesses Production Tracking in Transactions.	2. Orders that are undergoing or pending for production is displayed.
3. Click View Details	4. Display the ordered furniture and it's production details.
5. Click 'Start' on any production phase displayed.	6. Display the materials needed and the form for saving the information of when the production started and who handles that phase of production
7. Click 'Update' on any production phase displayed.	8. Enables the user to update Production Information of furniture depending on what phase

	the production has gone to.
Update Materials Quantity	
1. Click an on-going production	2. Displays information about the production.
	3. Enables user to deduct or add a material quantity per phase.
Check job order information	
1. Click an order production finished.	2. Job order must be produced.
Check production Progress	
1. Click Production Tracking	2. Displays list of production and its information.
View Production History	
1. Click any order production icon.	2. Displays progress for each phase.
3. Click production history button.	4. Displays Production History.

Use case: **Monitor Delivery**

Actor/s: Manager/Customer

Purpose: Enables the management and the customer to track the delivery made per order.

Brief Description: Monitoring of the delivery for every order made.

Pre-condition: Order must be finished and paid.

Post-condition: Delivery information must be updated.

BASIC FLOW	
ACTION EVENT	SYSTEM RESPONSE
Appoint Delivery Man

ACTION EVENT	SYSTEM RESPONSE
Collect Payment	
1. Admin inputted the payment details from the customer.	2. Computes change for the remaining balance.
3. User clicks Save button	4. Official Receipt must be produced.
	5. Official Receipt should be printed.
Issue Billing Receipt	
3. Click Bill button from the Collections transaction.	4. Billing receipt is produced.
Issue Official Receipt	
1. Click Payment button	
2. Fill up Payment form and input the amount paid.	
3. Click Save button	4. Official receipt must be produced and ready to be printed.
View Payment History	
1. Click 'Payment' button.	2. Displays payment transaction to be fill up.
3. Click 'View Payment History' button	4. Customer's past records of payments is displayed.

Use case: **Generate Reports**

Actor/s: Manager

Purpose: To keep track of the records gathered from the transactions made by the business.

Brief Description: Official documents that gives summarized information about a particular transaction.

Pre-condition: There must be a daily/monthly/annually data from the records.

Post-condition: Reports for a particular transaction is produced.

BASIC FLOW	
ACTION EVENT	SYSTEM RESPONSE
Prepare Sales Report	
1. Admin accesses Sales Report in Reports.	2. Displays list of sales depending on the frequency selected.
3. Choose daily in frequency	4. Displays list of sales records within the day.
5. Choose monthly in frequency	6. Display list of sales records within the month.
7. Choose annual in frequency	8. Display list of sales records within the year.
9. Click Print button.	10. Must print sales report of within the chosen frequency.
Prepare Order Report	
1. Admin accesses Order Report in Reports.	2. Displays list of Order records depending on the frequency selected.
3. Choose daily in frequency	4. Displays list of Order records within the day.
5. Choose monthly in frequency	6. Display list of Order records

	within the month.
7. Choose annual in frequency	8. Display list of Order records within the year.
9. Click Print button.	10. Must print Order report of within the chosen frequency.
Prepare Production Report	
1. Admin accesses Production Report in Reports.	2. Displays list of Production records depending on the frequency selected.
3. Choose daily in frequency	4. Displays list of Production records within the day.
5. Choose monthly in frequency	6. Display list of Production records within the month.
7. Choose annual in frequency	8. Display list of Production records within the year.
9. Click Print button.	10. Must print Production report of within the chosen frequency.
Prepare Inventory Report	
1. Admin accesses Inventory Report in Reports.	2. Displays list of Inventory records depending on the frequency selected.
3. Choose daily in frequency	4. Displays list of Inventory records within the day.
5. Choose monthly in frequency	6. Display list of Inventory records within the month.
7. Choose annual in frequency	8. Display list of Inventory records within the year.

9. Click Print button.	10. Must print sales report of within the chosen frequency.

3.3 TECHNICAL SPECIFICATION

3.3.1. CLASS DIAGRAM

3.3.1.1 DATA DICTIONARY OF CLASSES

Tables	Description
ATTRIBMEASURE	Contains the measurements needed for an attribute.
ATTRIBUTES	Contains the attributes that a material may have.
BANK ACCOUNTS	Contains the bank account information provided by the management. If the customer chooses to pay via bank the information of the bank account will be coming from here.
BRANCHES	Contains the bank account information provided by the management. If the customer chooses to pay via bank the information of the bank account will be coming from here.
CHECK DETAILS	Contains the bank account information provided by the management. If the customer chooses to pay via bank the information of the bank account will be coming from here.
COMPANY INFORMATION	Table contains the company information. This information is displayed on the website.
CUSTOMER REQ IMAGES	Contains the images of the customization request from the customer.
CUSTOMER	Contains the information of the

	customer.
CUSTOMIZE REQUEST	Contains the information of the customer's customization request.
DELIVERY	Contains the delivery information of the order to be delivered.
DELIVERY DETAILS	Contains the information of the delivery.
DELIVERY RATES	Contains delivery rates information.
DESIGN PHASE	Contains the phases that a certain furniture design must undergo
DOWNPAYMENT	
EMPLOYEE JOB	Contains the jobs of the employee
EMPLOYEE	Contains the employee information
FABRIC PATTERN	Contains the patterns or designs of a fabric. It is used to define the fabrics properly.
FABRIC TEXTURE	Contains the texture. It is used to define the fabric type properly.
FABRIC TYPE	Contains the fabric types. It is used to define the fabrics properly.
FABRICS	Contains the fabrics. It is used to define the products
FRAME DESIGN	Contains the frame design. It is used to define the frameworks.
FRAME MATERIAL	Contains the frame design. It is used to define the frameworks.
FRAMEWORKS	Contains the frameworks. It is used to define the products.
FURNITURE CATEGORY	Contains the category of the products
FURNITURE DESIGN	Contains the possible design of the

	product
FURNITURE YPE	Contains the furniture type
INVOICE DETAILS	Table contains the invoice information of the customer's order
JOBS	Contains the jobs in the company
LOGS	Contains the actions or changes that a certain user did in the system
MATERIALS ACTIONS	Contains the actions done in the raw materials management
MATERIALS DELIVERIES	Contains the deliveries of materials received from the supplier.
MATERIALS DELIVERYDETAILS	Contains the details of the deliveries.
MATERIALS INVENTORY	Contains the quantity of materials.
MATERIALS TYPE	Contains the types of material. It is use to define a material.
MATERIALS VAR	Contains the variants of a material.
MATERIALS	Contains the materials used in making furniture.
MODE OF PAYMENT	Contains the mode of payments.
ONHAND	Contains the record of the on hand products.
ORDER ACTIONS	Contains the action that the user made on the orders.
ORDER CUSTOMIZATION	Contains the action customizations or special request the customer has made on every ordered furniture
ORDER REQUEST	Contains the details of every order
ORDER RETURN	Contains the record of orders that have been returned
ORDER RETURN DETAILS	Contains the details of the return

	record
ORDERS	Contains the orders made by the customers
PACKAGE INCLUSIONS	Contains the products included in every packages.
PACKAGE	Contains the packages available in the shop.
PAYMENT DETAILS	Contains the payments made by the customer
PENALTY	Contains the penalties of the shop
PHASES	Contains the phases a furniture must undergo under the production
PRODUCT IMAGES	Contains the other images of the product
PROD INFO	Contains the production information of a product according to phase
PRODUCT MATERIALS	Contains the materials needed in every production phase of the product
PRODUCTS ON PROMO	Contains the materials needed in every production phase of the product
PRODUCT	Contains the furniture that the shop can make.
PRODUCTION	Contains the production information of every ordered furniture
PRODUCTION PHASE	Contains the information of production per phases of production.
PROMO CONDITION	Contains the condition of a promo
PROMO PROMOTION	Contains the promotion or the incentive of a promo.
PROMO	This table contains the promos.

SUPPLIER	This table contains the suppliers
UNIT CATEGORY	Contains the category in which the unit of measurement falls.
UNIT OF MEASUREMENT	Contains the unit of measurements
UNIT OF MEASUREMENT CATEGORY	Contains the categories of unit of measurements
USER	Contains the information of the users of the system.
VARIANT DETAILS	Contains the details of the variants

3.3.3.2 DATA DICTIONARY

Table Name: tblattribute_measure

Related Table: tblattributes, tblunitofmeasurement_category

Description: This table contains the measurements needed for an attribute.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	amID	Attribute measure ID	INT (11)	N/A	N/A	1	Yes	1	N/A
FK	attributeID	ID of attribute from tblattributes	INT (11)	N/A	N/A	N/A	Yes	1	ID must exist in tblattributes
FK	uncategoryID	Description of the Project	INT(11)	N/A	N/A	N/A	Yes	1	ID must exist in tblunitofmeasure ment_category
	amStatus	Status of attribute measure record	VARCHAR(2 0)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblattributes

Related Table:

Description: This table contains the attributes that a material may have.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	attributeID	ID's of attributes	INT(11)	N/A	N/A	1	Yes	1	N/A
	attributeName	Name of attributes	VARCHAR(150)	N/A	N/A	N/A	Yes	Color	N/A
	attributeStatus	Status of attributes record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblbank_accounts**Related Table:**

Description: This table contains the bank account information provided by the management. If the customer chooses to pay via bank the information of the bank account will be coming from here.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	accountID	ID's of bank accounts record	INT(11)	N/A	N/A	1	Yes	1	N/A
	accountName	Name of the account holder	VARCHAR(100)	N/A	N/A	N/A	Yes	Aira B. Coronado	N/A

	accountNumber	Number of account	INT(11)	N/A	N/A	N/A	Yes	201402207MN0	N/A
	accountStatus	Status of bank account record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A
	accountRemarks	Remarks on the bank account	VARCHAR(100)	N/A	N/A	N/A	No	A bank account	N/A

Table Name: tblbranches

Related Table:

Description: This table contains the bank account information provided by the management. If the customer chooses to pay via bank the information of the bank account will be coming from here.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	branchID	ID's of the branch record	INT(11)	N/A	N/A	1	Yes	1	N/A
	branchLocation	Location of the branch	VARCHAR(45)	N/A	N/A	N/A	Yes	Bacoar	N/A
	branchAddress	Specific address of the branch	VARCHAR(450)	N/A	N/A	N/A	Yes	#23 Talaba II Aguinaldo Highway Bacoar	N/A

								City	
	branchRemarks	Remarks about the branch	VARCHAR(100)	N/A	N/A	N/A	Yes	The main branch	N/A
	branchStatus	Remarks on the bank account	VARCHAR(45)	N/A	N/A	N/A	No	Active	N/A

Table Name: tblcheck_details

Related Table: tblpayment_details

Description: This table contains the bank account information provided by the management. If the customer chooses to pay via bank the information of the bank account will be coming from here.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	check_detailsID	ID's of the check details record	INT(11)	N/A	N/A	1	Yes	1	N/A
FK	p_detailsID	ID of tblpayment_details record	INT(11)	N/A	N/A	N/A	Yes	2	Must exist in tblpayment_details
	checkNumber	Number of the check	INT(11)	N/A	N/A	N/A	Yes	0000001	N/A
	checkAmount	Remarks about the	DOUBLE	N/A	N/A	N/A	Yes	1000.00	N/A

		branch							
	checkRemarks	Remarks on the bank account	VARCHAR(100)	N/A	N/A	N/A	No	Payment for an order	N/A

Table Name: tblcompany_info

Related Table:

Description: This table contains the company information. This information is displayed on the website.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	comp_recID	ID of the company information record	INT(11)	N/A	N/A	1	Yes	1	N/A
	comp_logo	Filename of the company logo	VARCHAR(450)	N/A	N/A	N/A	Yes	Logo.png	N/A
	comp_name	The name of the company	VARCHAR(150)	N/A	N/A	N/A	Yes	Filipiniana Furniture Shop	N/A
	comp_num	The company's contact information	INT(11)	N/A	N/A	N/A	Yes	765-4321	N/A
	comp_email	The company's email address	VARCHAR(45)	N/A	N/A	N/A	Yes	filfurniture@gmail.com	N/A

	comp_emailPa ss	The company's email password	VARCHAR(4 5)	N/A	N/A	N/A	Yes	Password	N/A
	comp_address	The company's address	VARCHAR(1 50)	N/A	N/A	N/A	Yes	Talaba II, Bacoor City	N/A
	comp_about	The company's about	VARCHAR(4 50)	N/A	N/A	N/A	Yes	A furniture shop.	N/A

Table Name: tblcust_req_images

Related Table:

Description: This table contains the images of the customization request from the customer.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	cust_req_imag esID	ID of the company information record	INT(11)	N/A	N/A	1	Yes	1	N/A
FK	cust_req_ID	Filename of the company logo	INT(11)	N/A	N/A	N/A	Yes	2	Must exist in tblcustomize_req uest
	cust_req_imag es	The name of the company	VARCHAR(1 00)	N/A	N/A	N/A	Yes	Image.jpeg	N/A
	cust_req_imag	The company's	VARCHAR(4	N/A	N/A	N/A	Yes	Active	N/A

	eStat	contact information	5)						
--	-------	---------------------	----	--	--	--	--	--	--

Table Name: tblcustomer

Related Table:

Description: This table contains the information of the customer.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	customerID	ID of the customer record	INT(11)	N/A	N/A	1	Yes	1	N/A
	customerFirstName	Firstname of the customer	VARCHAR(45)	N/A	N/A	N/A	Yes	Rhodora	N/A
	customerMiddleName	Middlename of the customer	VARCHAR(45)	N/A	N/A	N/A	No	Barrameda	N/A
	customerLastName	Lastname of the customer	VARCHAR(45)	N/A	N/A	N/A	Yes	Coronado	N/A
	customerAddress	Address of the customer	VARCHAR(100)	N/A	N/A	N/A	Yes	#123 Brgy. Batasan Hills Quezon City	N/A
	customerContactNum	The customer's contact number	VARCHAR(45)	N/A	N/A	N/A	Yes	09216982449	N/A

customerEmail	The customer's email	VARCHAR(80)	N/A	N/A	N/A	Yes	rhodorabbcc@yahoo.com	N/A
customerStatus	The status of the customer	VARCHAR(45)	N/A	N/A	N/A	Yes		

Table Name: tblcustomize_request

Related Table: tblcustomer, tblframeworks, tblfabrics

Description: This table contains the information of the customer's customization request.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	customizedID	ID of the customization record	INT(11)	N/A	N/A	1	Yes	1	N/A
FK	accountdetailsID	ID of the customer who request the customization	INT(11)	N/A	N/A	N/A	Yes	2	Must exist in the tblcustomer
	customizedPic	Filename of the	VARCHAR(45)	N/A	N/A	N/A	No	Cust.jpeg	N/A

		customization image							
	customizedDescription	Description of the customization	VARCHAR(250)	N/A	N/A	N/A	Yes	Coronado	N/A
FK	customFrameID	ID of the chosen framework	INT(11)	N/A	N/A	N/A	No	2	Must exist in the tblframeworks
FK	customFabricID	ID of the chosen fabric	INT(11)	N/A	N/A	N/A	No	4	Must exist in the tblfabrics
	customStatus	Status of the customization	VARCHAR(45)	N/A	N/A	N/A	Yes	Pending	N/A

Table Name: tbldelivery

Related Table: tblemployee

Description: This table contains the delivery information of the order to be delivered

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
-----	------------	-------------	-----------	-----	-----	---------	----------	-------------	------------

PK	deliveryID	ID of the delivery record	INT(11)	N/A	N/A	1	Yes	1	N/A
FK	deliveryEmpAssigned	ID of the employee assigned in the delivery	INT(11)	N/A	N/A	N/A	Yes	2	Must exist in the tblemployee
	deliveryDate	Date of delivery	DATETIME	N/A	N/A	N/A	Yes	2017-08-25	N/A
	deliveryRate	Rate of delivery	DOUBLE	N/A	N/A	N/A	Yes	1000.00	N/A
	deliveryAddress	Address of delivery	VARCHAR(450)	N/A	N/A	N/A	Yes	#123 Kagawad Street Batasan Hills Quezon City	N/A
	deliveryRemarks	Remarks on the delivery	VARCHAR(100)	N/A	N/A	N/A	No	A delivery	N/A
	deliveryStatus	Status of the delivery	VARCHAR(45)	N/A	N/A	N/A	Yes	Pending	N/A

Table Name: tbldelivery_details

Related Table: tbldelivery,tblorder_request

Description: This table contains the information of the delivery.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	del_detailsID	ID of the delivery details record	INT(11)	N/A	N/A	1	Yes	1	N/A
FK	del_deliveryID	ID of the delivery record	INT(11)	N/A	N/A	N/A	Yes	2	Must exist in the tbldelivery
FK	del_orderReqID	ID of the order request	INT(11)	N/A	N/A	N/A	Yes	3	Must exist in the tblorder_request
	del_quantity	Quantity of the deliver order request to be delivered	INT(11)	N/A	N/A	N/A	Yes	5	N/A
	del_status	Status of the delivery details table	VARCHAR(45)	N/A	N/A	N/A	Yes	Pending	N/A

Table Name: tbldelivery_rates

Related Table: tblbranches

Description: This table contains delivery rates information.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	delivery_ratel	ID of the delivery	INT(11)	N/A	N/A	1	Yes	1	N/A

	D	details record							
FK	delBranchID	ID of the branch record	INT(11)	N/A	N/A	N/A	Yes	2	Must exist in the tblbranches

			5)						
--	--	--	----	--	--	--	--	--	--

Table Name: tblemployee

Related Table:

Description: This table contains the employee information

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	empID	ID of the employee	INT(11)	N/A	N/A	1	Yes	1	N/A
	empFirstName	First Name of the employee	VARCHAR(45)	N/A	N/A	N/A	Yes	Rhodora	N/A
	empLastName	Last Name of the employee	VARCHAR(45)	N/A	N/A	N/A	Yes	Cooronado	N/A
	empMidName	Middle Name of the employee	VARCHAR(45)	N/A	N/A	N/A	Yes	Barrameda	N/A
	empRemarks	Remarks	VARCHAR(100)	N/A	N/A	N/A	No	An employee	
	empStatus	Status of the employee	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	

Table Name: tblfabric_pattern

Related Table:

Description: This table contains the patterns or designs of a fabric. It is used to define the fabrics properly.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	f_patternID	ID of the pattern	INT(11)	N/A	N/A	1	Yes	1	N/A
	f_patternName	Name of the pattern	VARCHAR(45)	N/A	N/A	N/A	Yes	Floral	N/A
	f_patternRemarks	Remarks of the pattern	VARCHAR(100)	N/A	N/A	N/A	No	A combination of multiple flowers	N/A
	f_patternStatus	Status of the pattern record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblfabric_texture

Related Table:

Description: This table contains the texture. It is used to define the fabric type properly.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
-----	------------	-------------	-----------	-----	-----	---------	----------	-------------	------------

PK	textureID	ID of the texture	INT(11)	N/A	N/A	1	Yes	1	N/A
	textureName	Name of the texture	VARCHAR(45)	N/A	N/A	N/A	Yes	Very smooth	N/A
	textureDescription	Description of the texture	VARCHAR(100)	N/A	N/A	N/A	No	A very smooth texture	N/A
	textureRating	Rating defines the level of the texture's quality	INT(11)	N/A	N/A	N/A	Yes	5	N/A
	textureStatus	Status of the record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblfabric_type

Related Table: tblfabric_texture

Description: This table contains the fabric types. It is used to define the fabrics properly.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	f_typeID	ID of the fabric type	INT(11)	N/A	N/A	1	Yes	1	N/A
	f_typeName	Name of the fabric	VARCHAR(50)	N/A	N/A	N/A	Yes	Leather	N/A

		type							
	f_typeWeaves	Description fabric type's weaves.	VARCHAR(100)	N/A	N/A	N/A	No	Compactly weaved	N/A
FK	f_typeTexture ID	ID of the texture of the fabric type	INT(11)	N/A	N/A	N/A	Yes	5	Must exist in the tblfabric_texture.
	f_typeStatus	Status of the record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblfabrics

Related Table: tblfabric_type, tblfabric_pattern

Description: This table contains the fabrics. It is used to define the products.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	fabricID	ID of the fabric	INT(11)	N/A	N/A	1	Yes	1	N/A
	fabricName	Name of the fabric	VARCHAR(45)	N/A	N/A	N/A	Yes	Gold Rani	N/A
FK	fabricTypeID	ID of the fabric type	INT(11)	N/A	N/A	N/A	Yes	4	Must exist in the tblfabric_type

FK	fabricPatternID	ID of the fabric pattern	INT(11)	N/A	N/A	N/A	Yes	5	Must exist in the tblfabric_pattern
	fabricColor	Color description of the fabric	VARCHAR(255)	N/A	N/A	N/A	Yes	Black and Yellow	N/A
	fabricRemarks	Remarks about the fabric	VARCHAR(100)	N/A	N/A	N/A	No		N/A
	fabricPic	The filename of the fabric's image.	VARCHAR(100)	N/A	N/A	N/A	Yes	201708251047.jpeg	N/A
	fabricStatus	Status of the record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblframe_design

Related Table:

Description: This table contains the frame design. It is used to define the frameworks.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation
PK	designID	ID of the frame design	INT(11)	N/A	N/A	1	Yes	1	N/A
	designName	Frame design name	VARCHAR(45)	N/A	N/A	N/A	Yes	Classic	N/A

	e								
	designDescription	Design description	VARCHAR(250)	N/A	N/A	N/A	No	A classical design	N/A
	designStatus	Status of the record	VARCHAR(45)	N/A	N/A	N/A	Yes	Active	N/A

Table Name: tblframe_material

Related Table:

Description: This table contains the material used to create the frame. It is used to define the frameworks.

Key	Field Name	Description	Data Type	Min	Max	Default	Required	Sample Data	Validation

3.4 ARCHITECTURAL DESIGN

3.4.1 INFORMATION SYSTEM ARCHITECTURE

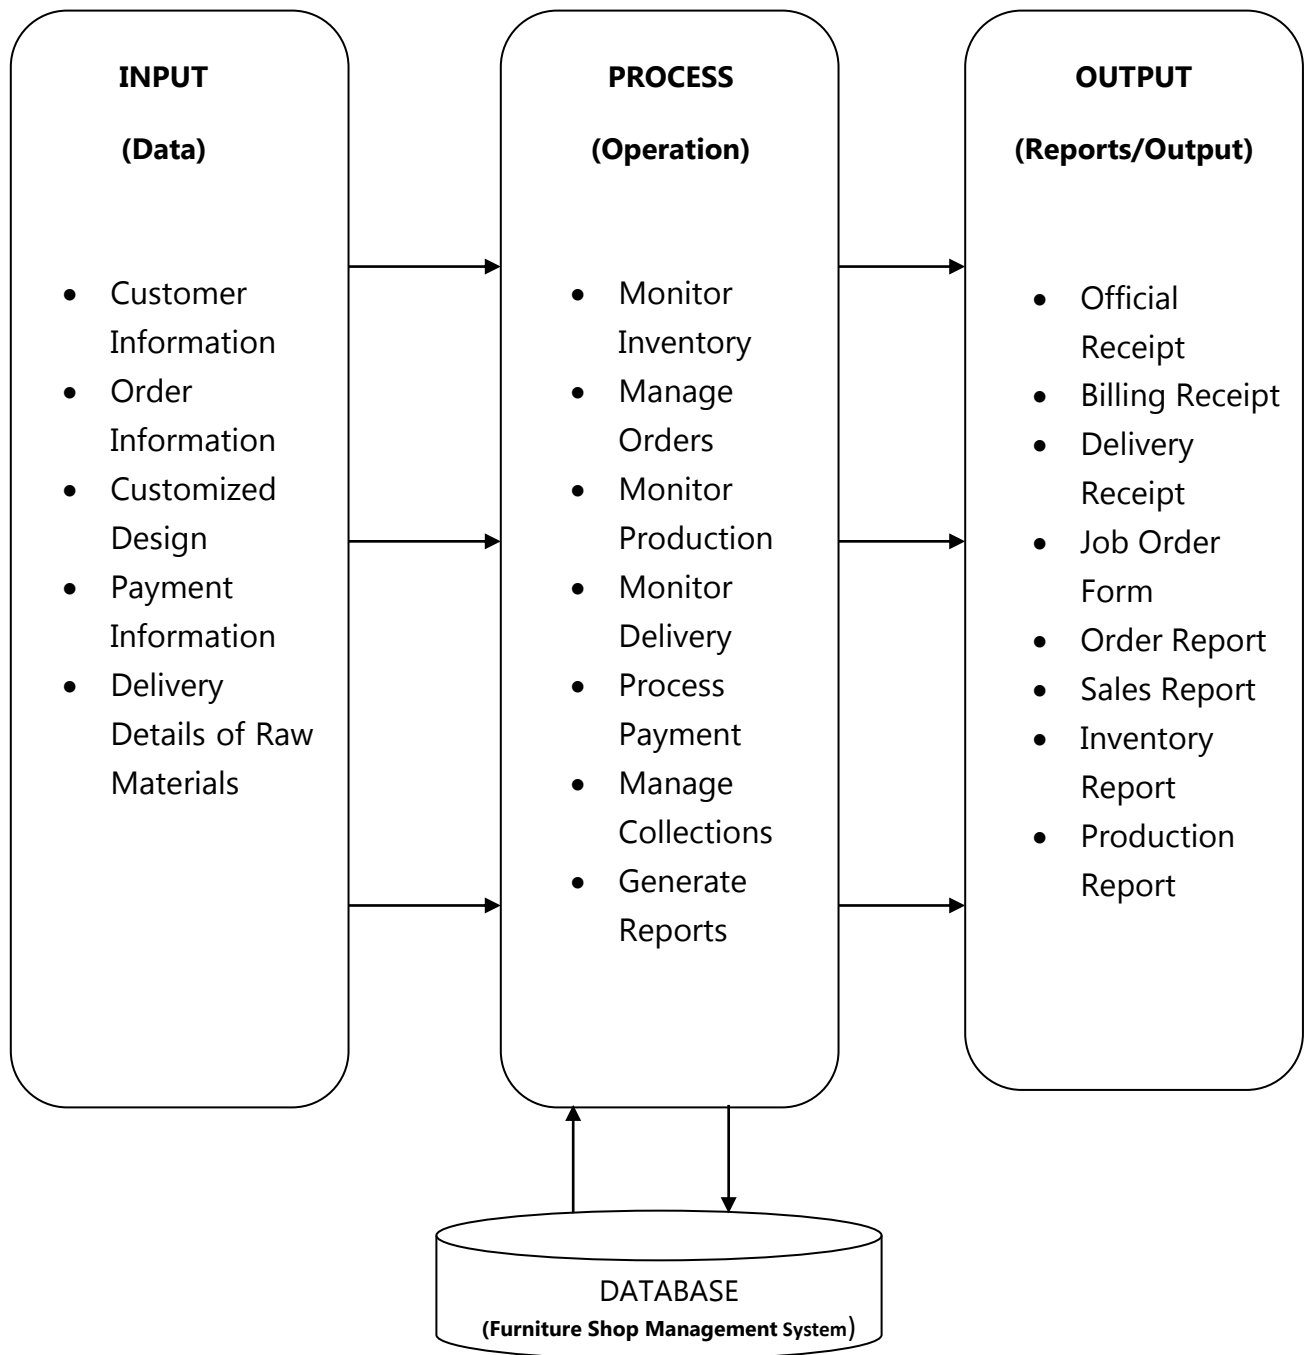

Figure 13. Information System Architecture

3.4.2 WEB ARCHITECTURE

Figure 14. Web Architecture

The system will be accessible to the owner/manager of the Furniture Shop and the customers through the browsers as mentioned, Google Chrome, Mozilla Firefox, Microsoft Edge and mobile browsers. Its processes includes order management, billing and collections and production tracking. All the records gathered through this transactions will be saved in the database.

3.4.3 CLIENT/SERVER ARCHITECTURE

Figure 15. Client/Server Architecture

The File Server will store the files needed for the system. Web Server serves as the middle man wherein it processes requests via HTTP and distribute information on the internet. This information will be displayed as web pages to for the clients to interact.

3.4.4 NETWORK ARCHITECTURE

Figure 16. Network Architecture

Having a Web Application requires a quality network performance that will ensure the security of data and information of the project. Smooth transaction process will also be experienced. The diagram shows that the firewall will secure the safety of the server and avoid malwares. The files and database used in this system will come from the file server and database server and send to the web server, which serves the customer the web pages they will interact.

CHAPTER 4

IMPLEMENTATION PLAN

4.1 TESTING PLAN

4.1.1 TEST DESIGN PROCESS

After analyzing the developed system, to be able to detect the defects before deployment and implementation, the proponents choose to conduct four types of testing. It includes the following;

- **Unit Testing**

Under the unit testing, testing of modules and components are done by the programmers themselves. The programmers validated the modules that they made.

- **System Testing**

The system testing, the entire system should be tested as per the requirement and must cover all the parts of the system. A person other than the programmers tested the system to identify other errors and bugs.

- **Security Testing**

The security testing, security is vital when it comes to e-commerce websites because it stores sensitive customer information that's why we require to conduct a security testing.

4.1.2 TEST EXECUTION PROCESS

Execute the test cases, report bugs, and capture information about the tests continuously, taking into account previous test results for each subsequent test. Capture and report information about the test just executed.

4.2. REQUIREMENTS PLAN

4.2.1 HARDWARE REQUIREMENTS

4.2.1.1 SERVER

Hardware Component	Specification
Processor	4 GHz, Intel Core i7
Installed Memory (RAM)	8.00GB or higher
Network	5Mbps
Hard Disk Drive	1TB or higher
Operating System	Windows 7 or higher

4.2.1.2 WORKSTATION

COMPONENT	SPECIFICATION
Operating System	Windows 7 or higher
Web Browser	Google Chrome, Mozilla Firefox, Microsoft Edge, Mobile Browser

4.2.2 SOFTWARE REQUIREMENTS

COMPONENT	SPECIFICATION
Language	PHP 7, HTML 5, CSS 3
Browser	Google Chrome, Mozilla Firefox, Microsoft Edge, Mobile Browser

4.2.2.1 OPERATING SYSTEMS

COMPONENT	SPECIFICATION
Operating System	Windows 7 or higher

4.2.2.2 DBMS

COMPONENT	SPECIFICATION
Database	MySQL

4.2.3 PEOPLEWARE (End Users, Systems Administration, Etc)

ACTOR	RESPONSIBILITIES
Furniture Shop Owner/Manager	Administrator of the Furniture Shop Management System. Head of the Furniture Shop. Manages transactions of the system.
Customer	Orders a furniture, can be from the brochures or sent customize design. Monitors production and delivery of his/her purchased order.

4.3 QUALITY PLAN

Quality plays a big role in considering a project successfully finished. To ensure the system's great performance, accuracy, reliability and usability, here are the plan followed:

- The system undergone series of test in order to ensure it is running smoothly and produces valid and reliable outputs
- People other than the proponents tried using the system to ensure the user friendliness of the system.
- The team conducted daily to weekly meetings in order for everyone to be updated on the project's status.
- The team communicates with each other and tells everyone the updates that they have done so far as well as the concerns and other ideas they have to ensure the project's quality.

4.4 SECURITY PLAN

SECURITY POLICIES	SECURITY FEATURES
<ul style="list-style-type: none">• User Policies	Users allowed to access the system will only be the owner/manager and any user that has confirmed his registration through the email

	confirmation feature.
<ul style="list-style-type: none">• Password Policies	Restriction of access of records for files containing confidential information. The system secures restriction of access from authenticated users only.
<ul style="list-style-type: none">• Internet Policies	The website has a feature of CAPTCHA that prevents bot from registering on the website.

4.5 SYSTEM MAINTENANCE AND SUPPORT PLAN

4.5.1 PREVENTIVE MEASURE PLAN

In order to attain a smooth transaction process of the system and avoid unnecessary errors, the proponents have acquired preventive measure plan that will help the users of the system, these are the following:

- Critical data and vital records should be backed up and sent off-site for storage.
- A necessarily proper training on how to use the system will be conducted for the users.
- The work areas are comfortable and safe.
- Back up files every night, to multiple locations.
- Install anti-virus, anti-malware and a firewall software.
- Do not click suspicious ads or emails.
- Read and apply instruction from the User Manual.

4.5.2 CORRECTIVE MEASURE PLAN

On the assumption of errors and failures, there are corrective measure to be executed upon the circumstances:

- Scan for viruses with the malware software installed on your PC.
- Retrieve files from the synced data from the trusted host server.

- Contact a professional regarding the failure of the hard drive.

4.5.3. BACKUP AND RECOVERY PLAN

To secure the files and maintain the functionality of the system, it must have a backup plan. The proponents think of the following as backup and recovery plan:

- **Virus/Malware**

In case of an attack of a malware, the system has installed anti-virus software that will avoid the virus to spread.

- **File Corruption**

To secure files on the system, the proponents determine to have File Server Backup Software installed. To keep files from the transactions made in the system.

- **Database Backup**

Nightly back up of database is stored in the system files. Furthermore, it is also being back up in the Database Server.

CHAPTER 5

RECOMMENDATION

Upon determining and evaluating every problems encountered by the business, the proponents affirm that the Furniture Shop Management System will be effective in helping the furniture shop from its tedious business process of managing orders and monitoring its production and delivery operation.

The system will be able to lessen the excessive use of papers, and the voluminous brochures. Charts of fabric are organized and stored in the system, wherein the customers can choose from the list of it. It also uses the proper forms needed for every transaction made that will decrease the possible rate of losing a data.

With the Furniture Shop Management System, the shop will have increase in sales because of the reachable way of ordering, through the website. Monitoring of the production and delivery will be easier for both the customer and the management. Queries and Reports will be automatically generated wherein they can track the progress of the business.

APPENDICES

DATA GATHERING INSTRUMENTS

The proponents used the following instruments in gathering data from the client to support the development of the project:

1. UNSTRUCTURED INTERVIEW

- The proponents initially conducted an unstructured interview on the day we found our client. This is the part where we asked them if they are alright with sharing information with us regarding our study and also where they introduced us to the basic in and outs of the business and what problems they encounter at times.

2. OBSERVATION

- We, the proponents observed the shop situation every interview. We observe how they organize their brochures, their forms and how they interact with the client to further identify what problems they encounter and what solution we can provide them.

3. TRANSCRIBING

- The proponents were given some documents and forms to study. We transcribe those documents and filter what data or information is needed the most. We got out form fields from these documents and forms.
-

CLIENT FORMS & REPORTS

Sales Invoice

Sold to: _____ Date: December 12, 2016
Address: _____ Contact No.: _____

Quantity	Particular Item	Amount

EDUCATIONAL BACKGROUND

2014 – Present	Bachelor of Science in Information Technology Polytechnic University of the Philippines Sta. Mesa, Manila
2010 – 2014	Batasan Hills National High School Batasan Hills, Quezon City
2004 – 2010	Batasan Hills Elementary School Batasan Hills, Quezon City

CORE QUALIFICATIONS

- Knowledgeable with the following:
 - PHP, Java Script, CSS, HTML, jQuery, Bootstrap
 - Database Administration (MySQL Workbench, MS SQL Server, PHPMyAdmin)
- Basic knowledge with the following:
 - COBOL, C, C#, Java SE, Java EE
 - Adobe Photoshop
 - Adobe Flash
- Proficient in Microsoft Office Tools (MS Word, MS Excel, MS PowerPoint).
- Possesses good communication skills.
- Dedicated and hardworking in accomplishing tasks given.
- Flexible in working with a team.
- Adaptable and eager to learn.

CERTIFICATES AND ACHIEVEMENTS

- Dean's Lister – 2nd Year 1st Semester – **June 2015**
 - Proxor Rating 3 SDE – Java Certification – **September 2016**
 - DOST-SEI JLSS Scholar – **Year 2016**
-

AFFILIATION

- **PUP Institute of Bachelors in Information Technology Studies (IBITS)**
2014 – Present
Member

SEMINARS ATTENDED

- **5th IT Research Forum**
Polytechnic University of the Philippines
2017
- **iBITS Mid-Year Seminar 2017**
Polytechnic University of the Philippines
2017
